Call for Participation in Inter-laboratory Comparison

Considering the challenges that were identified in different laboratories across the country during Laboratory Designation process and related laboratory assessments that were undertaken from 2017-2019, Rwanda Standards Board (RSB) remarked the need to establish inter-laboratory comparison schemes to provide remedy to the identified issues.

Inter-laboratory comparison aims to validate the capability of a laboratory to provide the customers with accurate and reliable results within permissible levels of uncertainty, and to ensure that an adopted analytical method is suitable for the intended purpose.

It is against this background that RSB resolved to establish inter-laboratory comparisons in chemistry, microbiology and materials testing. More details about the Inter-laboratory comparisons schemes to be provided are provided in the annexed **Inter-laboratory comparison registration form**.

RSB calls all interested laboratories to register in order to participate in relevant scheme based on their scope of testing. Applying laboratory fills the form and sends it to the relevant scheme contact person indicated on the form.

NB: Deadline for registration is December 15th, 2020.
